

 Iborain Safety Ltd. — Revenue Evidence Statement

Reporting Period: May 19 – Aug 17, 2026
Target Category: Entrepreneurship & Job Creation
Monorepo: bobybarack/iborain-safety

Official Verification of Revenue Status & Customer Pilot Pipeline • Build with Gemini XPRIZE

OFFICIAL PRE-REVENUE DECLARATION (\$0.00 USD):
In accordance with the Build with Gemini XPRIZE guidelines, this statement certifies that **Iborain Safety is currently pre-revenue (\$0.00 USD / KES 0 earned)** during the 90-day competition period. 100% of our resources and effort were dedicated to hardware fabrication, edge-to-cloud vision broker engineering, and securing pilot deployment agreements with estate security committees in Nairobi, Kenya.

1. M-PESA BUSINESS & BANK ACCOUNT VERIFICATION

Account Name & Entity	Settlement Channel	Recorded Revenue (May 19 – Aug 17)	Audit Status
Iborain Safety Platform Ops	M-Pesa Daraja B2B Paybill & KCB Account	\$0.00 USD (KES 0.00)	Verified Zero-Balance Inflow

2. CUSTOMER VALIDATION & PILOT ESTATE COMMITMENTS

Under our **"Package A: Zero-CapEx Safety Lease"** commercial playbook, estate security committees are onboarded via a 14-day zero-cost trial before billing commences via monthly M-Pesa STK push. The following 3 third-party residential communities have executed pilot agreements:

Customer / Community Name	Location / Corridor	Households	Pilot Agreement Status	Post-Trial MRR
Syokimau Estate Security Committee	Mombasa Road Corridor, Nairobi	65 Homes	14-Day Deployment Trial Executed	KES 6,500/mo (\$49/mo)
Ruiru Gated Residential Court	Thika Superhighway Corridor, Kiambu	45 Homes	14-Day Deployment Trial Executed	KES 6,500/mo (\$49/mo)
Membley Community Watch	Northern Bypass Corridor, Nairobi	70 Homes	14-Day Deployment Trial Executed	KES 6,500/mo (\$49/mo)
TOTAL COMMITTED PILOT PIPELINE		180 Homes	3 Active Sentry Deployments	KES 19,500/mo (\$150/mo)

3. HARDWARE PROTOTYPING TIMELINE & ALIEXPRESS DELAY CERTIFICATION

Our initial hardware deployment was delayed due to overseas supply chain delivery failures for ESP32-S3 microcontroller chips ordered via AliExpress. We successfully overcame this blocker by partnering with **ChipuRobo STEM Makerspaces** in Nairobi, transitioning to an industrial Raspberry Pi Zero 2 W + Sony IMX500 AI Camera architecture assembled locally.
